Preface

This dictionary has been compiled with the aim of giving an overview of the English, German, French and Italian names of reptiles. The Basic Table contains, in alphabetical order, the scientific names of families, genera, species and some sub-species with, again in alphabetical order, their identified names in English, French, German, and Italian, which are given in the singular for species and sub-species and in the plural for other terms. The relevant order and family are shown for each term and the taxonomy is that of the sources consulted.

The criteria to determine which names are hyphenated or shown as two or more words are based on the frequency they are used by, and the relative importance I have attached to, the sources consulted.

My special thanks go to Katayoun Asadollahzadeh-Sarab who prepared this work for publication and to my wife Myra for her support and encouragement.

Murray Wrobel
